## MARKETABLE PHOSPHATE ROCK IN AUGUST 2018

U.S. marketable phosphate rock production in August was 2.32 million metric tons (Mt), which was 7% higher than that in July and 10% lower than that in August 2017. Total production for January through August was 18.0 Mt, which was 4% lower than that in the same period of 2017 (table 1).

Phosphate rock used in the United States in August was 2.05 Mt, which was slightly higher than that in July and 10% lower than that in August 2017. Total phosphate rock used in January through August was 15.5 Mt, which was 13% lower than that in same period of 2017. U.S. producer stocks were slightly higher those at the end of July and 36% higher than those at the end of August 2017 (table 1).

Imports of phosphate rock in August were 349,000 metric tons, which was 36% higher than those in July and 62% higher than those in August 2017. Imports of phosphate rock for

January through August were 40% higher than those in same period of 2017 (table 2). Imports of phosphate rock can vary substantially from month to month based on sales contracts and production schedules of the phosphate plants.

Apparent consumption for 2018, based on annualized data, was estimated to be 26.3 Mt, compared with 28.2 Mt in 2017 (table 3).
