QUESTIONS TO NEPEC

1. What degree of "publication" should be required for the underlying components of the model; i.e., what flexibility should be allowed with respect to the standards and dates outlined above?

2. Does NEPEC agree to review the WGCEP products for the NSHMP during January, 2007?

3. To what degree should the model used for the USGS hazard map update for California correspond with the CWGEP earthquake rate model?

4. Should they be one and the same or is some divergence appropriate or even potentially necessary?

5. Does NEPEC agree to review the WGCEP products for the CEA during August, 2007? If so, should a special NEPEC/CEPEC/SRP meeting be scheduled for this review, perhaps as a one-day session of Workshop 10?
