The U.S. Geological Survey has been collecting water-quality data in Texas since 1907. Today (2018) the Texas Water Science Center database contains more than 11,700 sites with discrete water-quality data. In Water Year 2017, more than 4,400 discrete water-quality samples at 352 sites were collected in Texas. U.S. Geological Survey National Water Information System (NWISWeb) data are available on the Web at URL https://nwis.waterdata.usgs.gov/tx/nwis/qwdata.
The U.S. Geological Survey (USGS) Texas Water Science Center works in cooperation with approximately 100 municipalities, river authorities, groundwater districts, and State and Federal agencies in Texas to provide reliable, impartial scientific information to resource managers, planners, and other customers. This information is gathered by the USGS Texas Water Science Center to minimize the loss of life and property from natural disasters, to contribute to the conservation and sound economic and physical development of the Nation’s natural resources, and to enhance the quality of life by monitoring water, biological, energy, and mineral resources.

If you have any questions or concerns with which we can assist you, contact us or visit our Web site at <https://www.usgs.gov/texas>, or the national Web site at <https://www.usgs.gov>. We look forward to serving you in the near future.
